

Call for CEE Symposia

CEE symposia take place twice a year, in spring and autumn.

The aim of the symposia is to provide an overview of current research, to foster exchange and collaboration within and beyond the CEE and to give younger CEE researchers an opportunity to present their work.

All past symposia have been very successful and covered topics as diverse as speciation, ecological processes in the Amazon, functional anatomy, biodiversity and ecosystem function, ancient DNA.

The CEE supports symposia with a financial contribution of up to £1000 and will assist with obtaining additional funding wherever possible.

How to suggest a symposium

To make a suggestion, fill in the form on the CEE web site:

<http://www.ucl.ac.uk/~ucbtcee/symposia>

The deadlines are **15th June** and **15th December** every year (for the spring and autumn symposium the following year, respectively). Successful proposals will be announced shortly after each deadline.

Why suggest a CEE symposium?

A symposium is a unique opportunity to invite and interact closely with leading scientists in a field and to get a complete overview of current ongoing work.

It will put you in the spotlight.

UK research councils now require a Knowledge Exchange plan. Stating that a symposium will be organised under the CEE label will add credibility to your KE plan.
